“Aspiring Data Analyst proficient in Python, Cloud Platform, and visualization tools like Power BI, with experience automating data pipelines and analyzing large datasets to drive decision-making and proficiency in coding with background knowledge in DSA.”

Skills & Interests

- **SoftSkills :** Empathy, Oral and written communication, Teamwork and collaboration, Critical thinking.
- **Programming Languages:** Python, R programming, C++, JavaScript, TypeScript, SQL.
- **DataBase/DBMS:** MySql, PostgreSQL, MongoDB, NeonDB
- **Frameworks:** NextJS, ReactJS, FlaskDjango, NodeJS, ExpressJS, VueJS
- **Software Dev Tools:** Mage.ai, Docker, Git/Github, FastAPI, REST API, Shad-CN, TailwindCSS, Bootstrap5, Vercel.
- **Machine Learning and Data Science :** Pandas, Numpy, SciKit, Matplotlib
- **Cloud Technology:** [Google Cloud Platform](#), [Amazon Web Services](#), Azure.

Projects and Experiences

Deadline-Detector **Data Engineer** {3 months}

Tech Stack : NanoNets, Computer Vision, Python Programming

- A **user-centric application** to address the common issue of missed deadlines among students.
- Implemented an **OCR-powered pipeline** using **Nanonets** to scan uploaded PDFs, extract deadline dates and times, and set automated reminders.
- This solution effectively aids users in timely form submissions and deadline adherence, **enhancing their organizational efficiency**.

Trip-Cost-Estimator(GCP) **Data Engineer** {3 months}

Tech Stack : Python ,Google Cloud Platform and Storage and Compute Engine, BigQuery, LookerStudio, JupyterLab

- Managed and processed over 10 GB of raw data stored in **Google Cloud Storage**.
- The Python scripts executed on **Google Compute Engine** improved data cleaning efficiency by 30%.
- The transformed data loaded into **BigQuery** enabled efficient querying, reducing query times by 50%.
- The insights visualized through **LookerStudio** dashboards and interactive reports improved decision-making speed by 20%.

HealthCare Recomm. Sys.(PreFinal Year) **Mach. Learning Engineering** {6 months}

Tech Stack : JavaScript, Python Programming, Google Colab, Flask/Django, Bootstrap, TailwindCSS, MachineLearning.

- Handling and preprocessing medical data to ensure it's ready for analysis and model training using **ML**.
- Using **Flask** to manage the server-side operations, including data handling and API creation.
- Built a user-friendly interface using **HTML, CSS, and Bootstrap**, allowing healthcare professionals to input patient data and receive recommendations.

My-Web-Profile (link) **Software Developer** {3 months}

Tech Stack : TypeScript, JavaScript, ReactJS, TailWindCSS, Bootstrap, MongoDB, Github, ExpressJS, Vercel

- A web application with the ability to store user data and having implemented on **MERN stack**.
- Frontend, created on **React framework** showcasing different features and knowledge of **HTML,CSS and JS**
- Backend, created a server side rendering with implementing to store contacts on Database using **JS**
- Finally deploying the web/mobile application with **Vercel**

Flower Disease Imagery Visualization (Conference Paper-IEEE standard) [semester project] {6+ months}

Tech Stack : Google Colab, Nvidia Cuda, Python Programming, LaTeX, Roboflow, Computer Vision

- The project tackled the challenge of early and accurate diagnosis through computer vision on a dataset of 10,000+ flower images and augmenting each one on **Roboflow**
- Implemented various **YOLO algorithms** to create models, improving disease detection accuracy.

- The project paper provided a comparative study about all the YOLO v5 and v8 models (nano and small) as well as the latest YOLO v9 and Gelan model, contributing to the field'.

Brand Monitoring - Sentiment Analysis **Data Analyst Visualization Engi.** {on going}

Tech Stack : Google Cloud Platform, Google Cloud Storage, Looker Studio, BigQuery, Gemini AI, Google Cloud Functions

- Handled real-time analysis of over 10,000 plus social media data streams per day using **Functions**.
- The efficient handling of data by **Cloud Storage** and Data Flow resulted in a 35% reduction in processing time.
- The pre-trained models from **Vertex** analyzed sentiment with an accuracy of 85%.
- **BigQuery** stored data and **Looker** visualized trends, improving brand perception and understanding by 30%.

SplitCare - Personal Finance Assistant **SDE-I** {on going}

Tech Stack : Clerk, Hono, Drizzle ORM, NeonDB, Stripe

- SplitCare is an online expense-splitting application underdevelopment. The app will facilitate payments of shared bills by calculating what each person in a group owes.

Education

Kalinga Institute of Industrial Technology, Bhubaneswar
B.Tech in Computer Science and Engineering

2021 - present
CGPA - 7.7
